

Palatine Models AJ Starter Pack

Suggested order of constructing the etches

- 180 bending jig
- AJ Pivot plate bending jig
- AJ Turner bending jig

Next:

Make a few coupling hooks using the AJ Turner bending jig. Practice getting the shape right using the angle checking tool on the 180 jig.

Then:

Using one of your wagons mount one of the blocks in the centre of the wagon and measure the position of the pivot point before making a bend using the AJ pivot plate bending jig. Mount the couplings on the block.

More details—check out www.mmrs.co.uk where there is a lot of technical detail on AJ couplings.
